Helping Hand
Charitable Trust
Medical Home

Medicci Home

MISSION

To extend helping hand that steadies and relieve the stress of everyday life and bring cheers to all

VISION

To make positive and rewarding life experience to elderly and any physically challenged persons by adding life to their years rather than just adding years to their lives.

OUR PHILOSOPHY

Every person bedridden or frail is entitled to a rich quality of life, with the opportunity to live as independently as possible with dignity and respect.

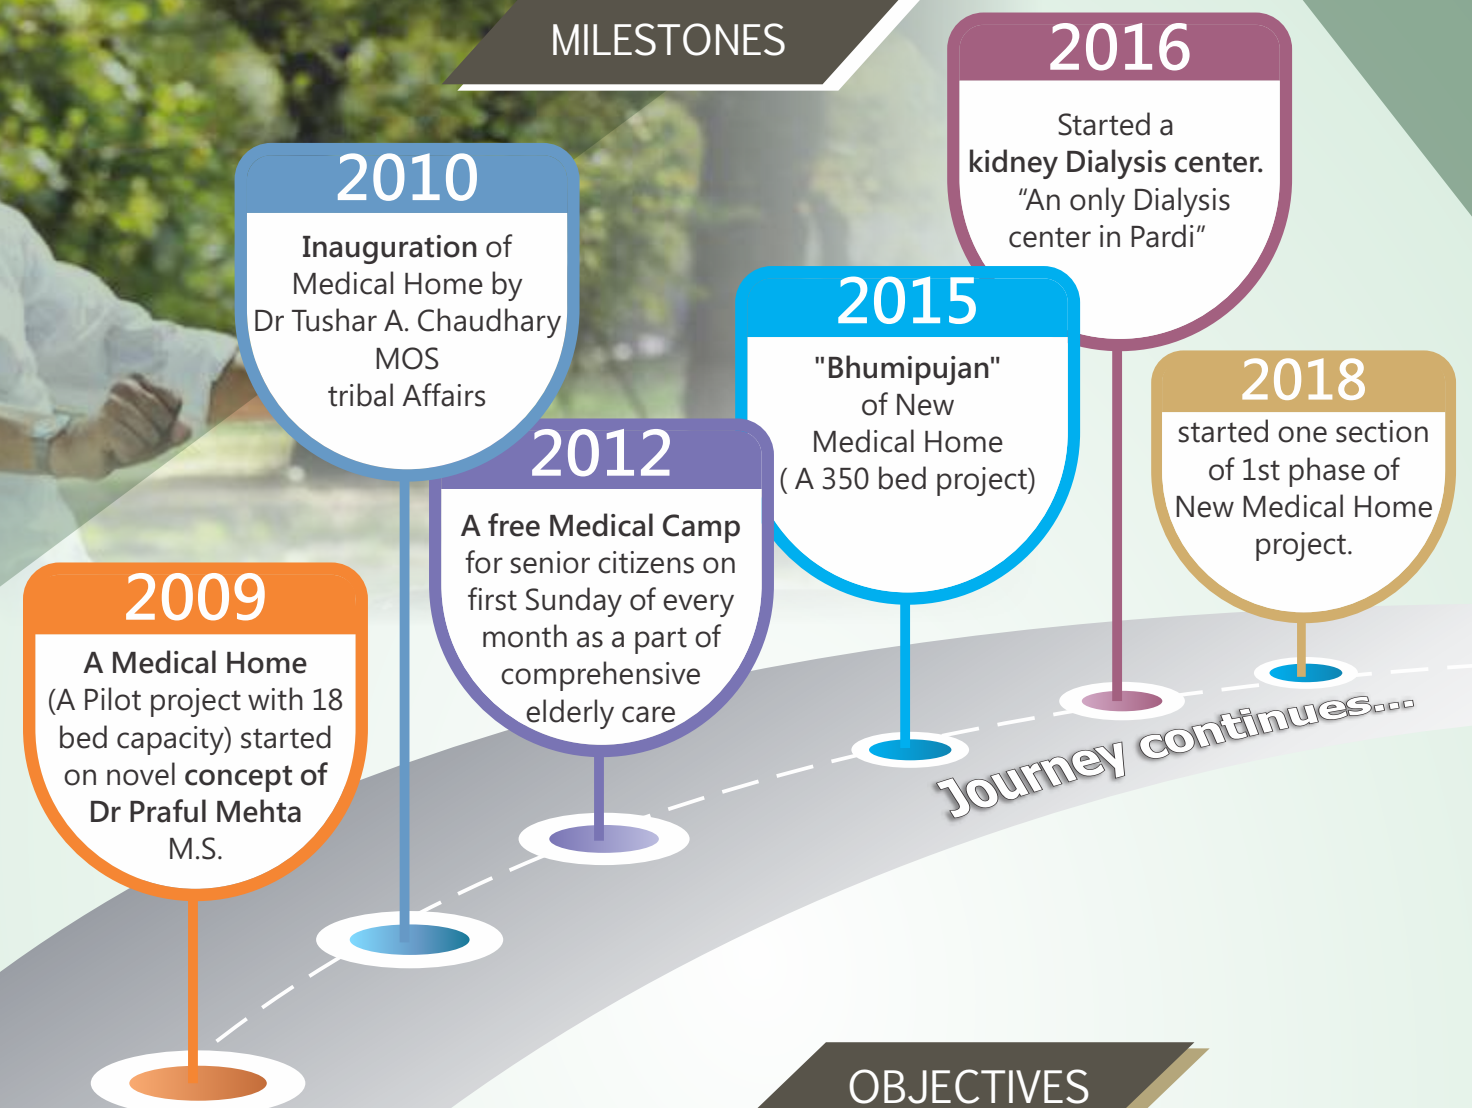

INTRODUCTION

The HELPING HAND CHARITABLE TRUST is a non-profit organization committed to help needy persons with a preferential option for any bedridden person/aged frail persons. The "emblem" of Trust signifies the waves as "a sea of difficulties" and a helping hand which tries to ease the situation and raises it to have a light of Sun with love, care and compassion.

"Helping hands are always better than whispering prayers"

MILESTONES

OBJECTIVES

- To provide quality care for any bedridden/aged/frail persons better than home and akin to hospitalcare
- To ensure them dignity of Life, quality, safety and improved health.
- To educate and prepare them to cope with their real-life situation so as to live an independent dignified life in society
- To provide compassionate care during medically challenged period of life.
- To motivate NGO's, Government and individual for providing elderly care/bedridden care on Medical Home concept at all district places in India.
- To promote active ageing / healthy ageing by various preventive measures to reduce morbidity

OUR VALUES

- TRUST : Act with integrity and fairness
RESPECT : Consider everyone with dignity, kindness and compassion.
QUALITY : Continuously pursue excellence in care and service.
TEAMWORK : Uplift each other with positive energy and support
PILLARS of SUCCESS : Dedicated caregivers, professionals and employees.

 Commissioner of Income Tax Valsad

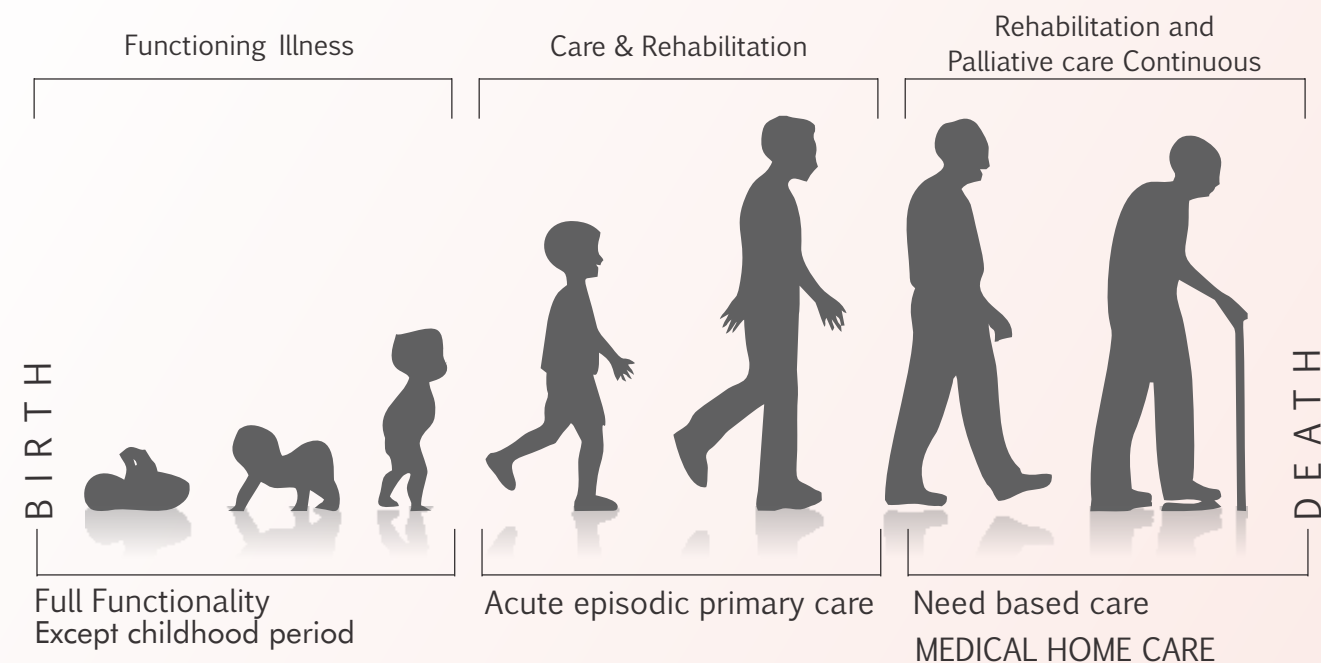

LIFECOURSE OF A PERSON

“Yesterday's child is Today's adult and Tomorrow's grandparents”

Every person born is to grow old but health wise the ageing journey is a complex one. A person's functional status can move between reasonable functionality to frailty in later stage of life fueled by associated medical illness. Certainly, the end of life is inevitable in all settings. It is essential that professionals & care givers can enable people to maintain a good quality life in all possible ways in all phases of life even though extension of life is no longer realistic. The way we attend to the ageing bedridden care reflects our culture & shows success or failure of the development of any given society

PROGRESSIVE AGEING

(A reality of Life)

ACTIVE AGEING

(A creation of Life)

“Active ageing” term was coined by World Health Organization (WHO) in 2002 and it portrays positive experience of longer life with physical, mental and social wellbeing. This helps in preventing and reducing the burden of excess disabilities, chronic diseases and premature mortality. Adoption of healthy lifestyle even in later years of life like engaging in appropriate physical activity, healthy eating and sensible medication can prevent disease complications and functional decline which extends longevity and enhance one's quality of life.

MEDICAL HOME A NEW CONCEPT

*An innovative concept of caring any
bedridden/aged/frail person*

A Medical Home is a well-coordinated, proactive, preventive, chronic, long term and end-of-life care which is a fundamental requirement for aged, bedridden persons and not an acute focused episodic care available in hospitals.

NEED & EMERGENCE OF NEW CONCEPT

Population Ageing is an inevitable and irreversible demographic reality which demands major transformation in health and medical care. The World's population is ageing rapidly. Since year 2000, At present one in every nine persons is 60 years of age or above and expected to increase to one in five by 2050. At present, India has more than 116.6 million elderly as per 2015 data and projected to reach 158.7 million in 2025. The relatively young India today will turn into a rapidly greying society in coming decades. These changes are attributed to multiple factors like change in mortality & fertility rate, epidemiological shifts from infectious disease to chronic & degenerative disease associated with longevity plus urban lifestyle along with medical advancement.

As per global age watch index 2015 data, India is ranked 71st among 96 countries surveyed for comprehensive quality care for ageing populations. In healthcare, India ranks 87th that is below the regional average values on all health indicators. Geriatric Healthcare in India is challenging owing to different level of socio-economic status, cultural norms, lack of infrastructure, economic dependency and accessibility. Most of the Government initiatives are on maternal and child health and other developmental priorities. There has been little attention paid to ageing and chronic conditions. The ageing population has complex medical and sociological problems. Thus, elderly care is fast emerging as a critical element of healthcare system due to lack of adequate resources and preparedness.

At present, Elderly care tends to be accomplished in variety of settings like home care by family members, nursing home, geriatric outpatient department, Intensive care unit in hospitals depending on nature of their problems. In the Indian population, even today the younger generation sees elderly care as their responsibility and they are also under social and cultural pressure to do so. Family remains the first social institution for care of elderly but certain factors like rapid urbanization, declining concept of co-residence with parents, migration, gender conflict and nuclear family concept hinders a proper care at home. In addition to this, Older patients with acute illnesses do not recover well at the time of

release from the hospital. They require adequate support for their daily routines along with management of associated illnesses like Cerebro-vascular stroke, Diabetes, Fractures etc. Elderly Care at home becomes a massive task for any working couple despite willingness to do so. Elderly often receives sub-optimal care due to lack of coordination among multiple service providers like nursing agency, physiotherapy and medical services combining with untrained care givers and family members.

There is a need to develop an integrated and responsive system to address the needs of geriatric care and simultaneously should promote active ageing which will ease the load on caregivers. Dr. PRAFUL MEHTA (MS, FISC) practicing general surgeon and founder president of HELPING HAND CHARITABLE TRUST realized these unique health & living challenges which demands innovative solution. He designed a MEDICAL HOME concept which collaborates the home care by professional caregivers and hospital-like care by medical professionals under one roof. This maintains or prevents further deterioration in health and takes care in a dignified way. A Medical Home is neither an old age home nor a purely hospice care for terminally ill patients. It is a setup of hospital-like facility in a homely environment to rehabilitate the person on short term or long-term needs. The Medical home concept also stresses on active ageing by various preventive measures and prepares them to cope with unexpected realistic situation in life. So, the model of medical home concept is an innovative, scalable and affordable solution for comprehensive geriatric care.

A CONCEPT of MEDICAL HOME

ELDERLY CARE

Different Options

Assisted Living
Adult Day Care
Long Term Care
Nursing Home
Transitional Care
Hospice Care
Home Care

One Solution

Helping Hand
Charitable Trust

CONCEPT TO REALIZATION

The Helping Hand Charitable Trust implemented this pilot project with 18 bed capacity in year 2009 with great success & appreciation. This MEDICAL HOME delivers all personal care, nursing care, basic medical and physiotherapy care by professionals and skilled care givers under one roof. Thus, a medical home is a convalescent home with hospital like facility which adds life to their years rather than adding years to their life.

After successful implementation and execution, we, all trustees at Helping Hand Charitable Trust realized the massive need of such facility. We outlined an ambitious 350bed project on 3.5-acre land on the bank of river Par in PARDI District VALSAD, Gujarat. The first phase of 110 beds will cost Rs.12 crores. In May 2018, first two floors are made operational with 40 bed capacity at an expense of Rs.6 crores. The other two floor will be made operational within a short time. More than 250 patients have already taken benefit of Medical Home with a usual stay remaining in a range of 2months to 7years. Out of this, 120 patients recovered well and sent home happily. Others either transferred to tertiary care hospital for their illness or took last breath here.

SENIOR CITIZEN MEDICAL CAMP (FREE)

Active ageing or Healthy ageing is a fundamental requirement of any healthcare system which eases the burden of care giving to elderly population. The Helping Hand charitable trust is committed to comprehensive aged care. The Trust is organizing a **FREE MEDICAL CAMP** in association with Mehta Hospital on first Sunday of every month for senior citizens of surrounding area to promote healthy ageing. Our doctors give proper counseling about the disease and teach them how to live with and remain independent. At present, more than 1200 senior citizens are registered with this activity and every month 70-90 senior citizens are taking benefit of free service and living healthy life without any financial burden of routine checkups.

Difference Between Home Care & Medical Home Care

HOME CARE

MEDICAL HOME CARE

An individual based care	Care provided in group which enhance speedy recovery
Provided by Family Members. Gender conflict is a major barrier	Provided by trained coworkers and professionals
It lacks tracking of vitals, laboratory tests consultant's opinion and visit of doctor	Daily tracking of vitals, laboratory tests & daily round by doctors and consultant's opinion
Emergency response service not available	Emergency response service is always active
Care is varied as per the time available to family members	Care is determined as per proactive plan and standardized as per fixed schedule
Physiotherapy service has to be out sourced	In house physiotherapy service available
At home patients must inform about the problems	Professional and experienced staff take note of the problem before they complain
Timing for food and medication difficult to follow strictly	Timing for food and medication are strictly observed
Stool/urine/RT feeding becomes cumbersome at home	Stool/urine/RT feeding is a routine part of activity
Cost play a major role in individual care with help of other personnel	It becomes cost effective with extra benefits
Coordination with different service providers is difficult to manage	A well-coordinated service is provided by care givers in a professional manner.
Quality care and safety often compromised	Quality and safety is monitored by professionals and make rapid changes to improve it

INFRASTRUCTURE SET UP

- A helping hand charitable trust MEDICAL HOME campus spread over 3.5 acre land on bank of river PAR in lush green area overlooking parnera hills and river Par in north and railway bridge in west. The serene atmosphere helps the person recover fast and come back to normal life.
- Total 55000sq. feet Built up area with surrounding tree plantation and greenery
- A wide passage with vitrified floor tiles and wall dado of 8ft height
- Spacious Bathrooms with hot/cold water supply and hand showers with support for easy access. Bathrooms have no doors only curtain.
- Two bed size elevators for "ON BED" movement of patients & one service elevator.
- Whole premises and surrounding areas are under CCTV surveillance
- Nurse call system
- All spacious rooms with semi fowler bed with railing, over bed table a cupboard and a personal drawer

FACILITIES

- **Deluxe Rooms:** Single Occupancy (With AC, TV, Freezer), (With an option to keep attendant)
- **Special Rooms:** Single Occupancy (Non AC, TV) (With an option to keep Attendant)
- **Semi Special Rooms:** Twin sharing
- **General Room:** Triple Sharing
- **Guest Rooms:** Single/Double Rooms for the near and dear ones of residents who desire to stay with them for couple of days on chargeable basis (proposed).
- **Critical Care Unit:** A 10 bed intensive care facility. It is always uncertain for an elderly person with associated illness regarding critical care need, so our aim is to provide intensive care facility in same premises (proposed).
- **Yoga/Meditation Hall** (proposed)
- **Library**
- **Dining Room** Very spacious with facility to use dining table with wheelchair.
- **Kitchen:** A state of art facility which can cater more than 350 residents
- **Physiotherapy Room** (proposed)
- **Recreational Hall** (proposed)
- **Auditorium:** A 250 person capacity with added exhibition and dining space and separate kitchen and washroom area. (proposed)
- **Landscape Garden:** An arrangement for self or assisted movement with wheelchair or bed to experience the serene atmosphere and reconnecting with nature. (proposed)

KIDNEY DIALYSIS CENTRE

Dialysis is a process where a machine does the work a patient's kidneys would normally do. During a dialysis procedure, blood is removed from a patient's body filtered through a machine to remove impurities and then returned to the body.

Kidney disease is a prevalent medical condition all over India in recent times due to Diabetes, Hypertension other life style diseases. Many patients with End-stage renal disease, in other words total kidney failure have only option of receiving dialysis till they get renal transplant. Usually, dialysis is performed at least three times a week, so a dialysis center must be conveniently located in vicinity of a person who needs it. The Helping Hand Charitable Trust and Navjyot Trust Mumbai has joined hands with Mehta Hospital and started a first of its kind Dialysis center in year 2016 at Pardi with a sole objective to help many local kidney failure patients

FUTURE PLANS

- GDA (General Duty Assistant) course for ward boys and ayahs certified from NSDC (National Skill Development Corporation)
- CT Scan/MRI Centre
- Ambulance Service

OUR SERVICES

MEDICAL CARE

- Full time Doctors supervision
- Daily Doctors round morning and evening
- Emergency medical treatment
- Specialist/consultant's opinion/visit if required
- Management of chronic disease like stroke, Fracture, functional disability etc.
- Wound/bedsore dressing under Doctors supervision

My mother stayed in Helping Hand Charitable Trust for more than 4 years. The long stay and pleasant stay was only possible because the staff was fantastic in their support and accepted her as their own despite the language barriers. it is hard leaving this as it is hard to leave one's family. Keep up the good work!
